## 5. SANCTIONS EVASION TACTICS & INDICATORS

| | |
|---|---|
| ■■ **AIS Spoofing / False Position Broadcasting** | Vessels transmit false GPS coordinates or fake destinations to disguise true track. Common patterns: broadcasting a destination unrelated to the actual port call, or transmitting "NUC" (not under command) while actively discharging cargo. Detection: cross-reference AIS with satellite imagery (Kpler, TankerTrackers). |
| ■ **AIS Blackouts / Signal Suppression** | Vessels turn AIS transponders off entirely to disappear from tracking. Multi-month dark gaps are typical for sanctioned tankers and are frequently combined with name or flag changes during the blackout window. Detection: gap analysis in AIS history, satellite SAR imagery. |
| ■■ **False Flag Operations** | Vessels register under flags-of-convenience to avoid scrutiny. Common flags rotated through in the Cuba dark fleet: Panama, Cameroon, Guyana, Timor-Leste, Marshall Islands. Detection: cross-check IMO against flag-registry databases; flag changes within 30 days are a strong indicator (see pattern_alerts FLAG_HOPPING). |
| ═■ **Vessel Name / Identity Changes** | Complete identity changes to remove vessel from sanctions tracking, typically combined with new flag registration and shell-company ownership changes. Detection: track IMO numbers (permanent) rather than vessel names. The IMO survives any rebrand. |
| ■ **Ship-to-Ship (STS) Transfers** | Cargo transferred between vessels at sea to obscure origin. Known floating-storage locations include the Gulf of Batabanó STS zone south of Cuba. Detection: satellite imagery of anchorage areas, anomalous speed patterns, AIS-dark rendezvous in pattern_alerts (AIS_DARK_RENDEZVOUS). |
| ■ **Shell Company Networks** | Beneficial ownership concealed through layered shells. Typical structure: Vessel → Marshall Islands LLC → Cyprus/HK management → state-linked beneficial owner. See Section 6 for the current sanctioned-entity registry. Detection: beneficial-ownership databases, Panama/Pandora Papers analysis. |
| ■■ **Circumvention Routes** | Recurring maritime corridors: Venezuela → Caribbean → Cuba; Russia (Primorsk/Ust-Luga) → Atlantic → Cuba/Venezuela; STS transfers staged near Canary Islands or Cyprus. Recurring air corridors: HAV ↔ Caracas, HAV ↔ Moscow, HAV ↔ Tehran. See the dashboard map "Traffic Corridors" layer for the live set. |
| ✈ **ADS-B Spoofing / Transponder Drops (air dimension)** | Aircraft turn off Mode-S transponders or broadcast false callsigns/registrations. Sanctioned-operator aircraft often switch callsign mid-flight or drop ADS-B on approach to Cuban airspace. Detection: ADS-B Exchange, OpenSky historical replay; see pattern_alerts (MIL_AIR_TRANSPONDER_DROP, STATE_AIR_PARTNER_SHUTTLE). |

| ■ SANCTIONS COMPLIANCE ALERT | 17 oil/cargo vessels and 4 aircraft in scope carry confirmed sanctions. Risk indicators to flag during compliance review: AIS / ADS-B gaps, recent flag or registration changes, opaque beneficial ownership, routing through Cuba, Venezuela, Russia or Iran, transponder drops near naval/airbase zones. |
| ■ RECOMMENDED ACTIONS | 1. Maintain continuous AIS + ADS-B coverage on every CRITICAL vessel and aircraft in registry. 2. Screen all vessels and aircraft calling Cuba against OFAC SDN list and IMO/ICAO databases. 3. Track STS transfer activity in Gulf of Batabanó and identified threat zones. 4. Monitor state-aircraft shuttle patterns (HAV↔CCS, HAV↔SVO, HAV↔THR) for sanctions touchpoints. 5. Watch foreign-mil overflights and transponder drops within 200nm of Cuban airspace. 6. Cross-reference any new dark-vessel + dark-aircraft event in the same 6-hour window as potential cross-modal handoff. |
